

R9 Progress (inc. Rack and Compressors)

Melissa George

14/5/13

Summary

- R9 Model
- Rack Model
- Compressor Model
 - Next Steps

R9 Coordinate System

Z -ive through AFC toward door, x +ive to North (inner) wall

Figure: Rough schematic of the R9 hall. Green boxes are rack (large) compressors.

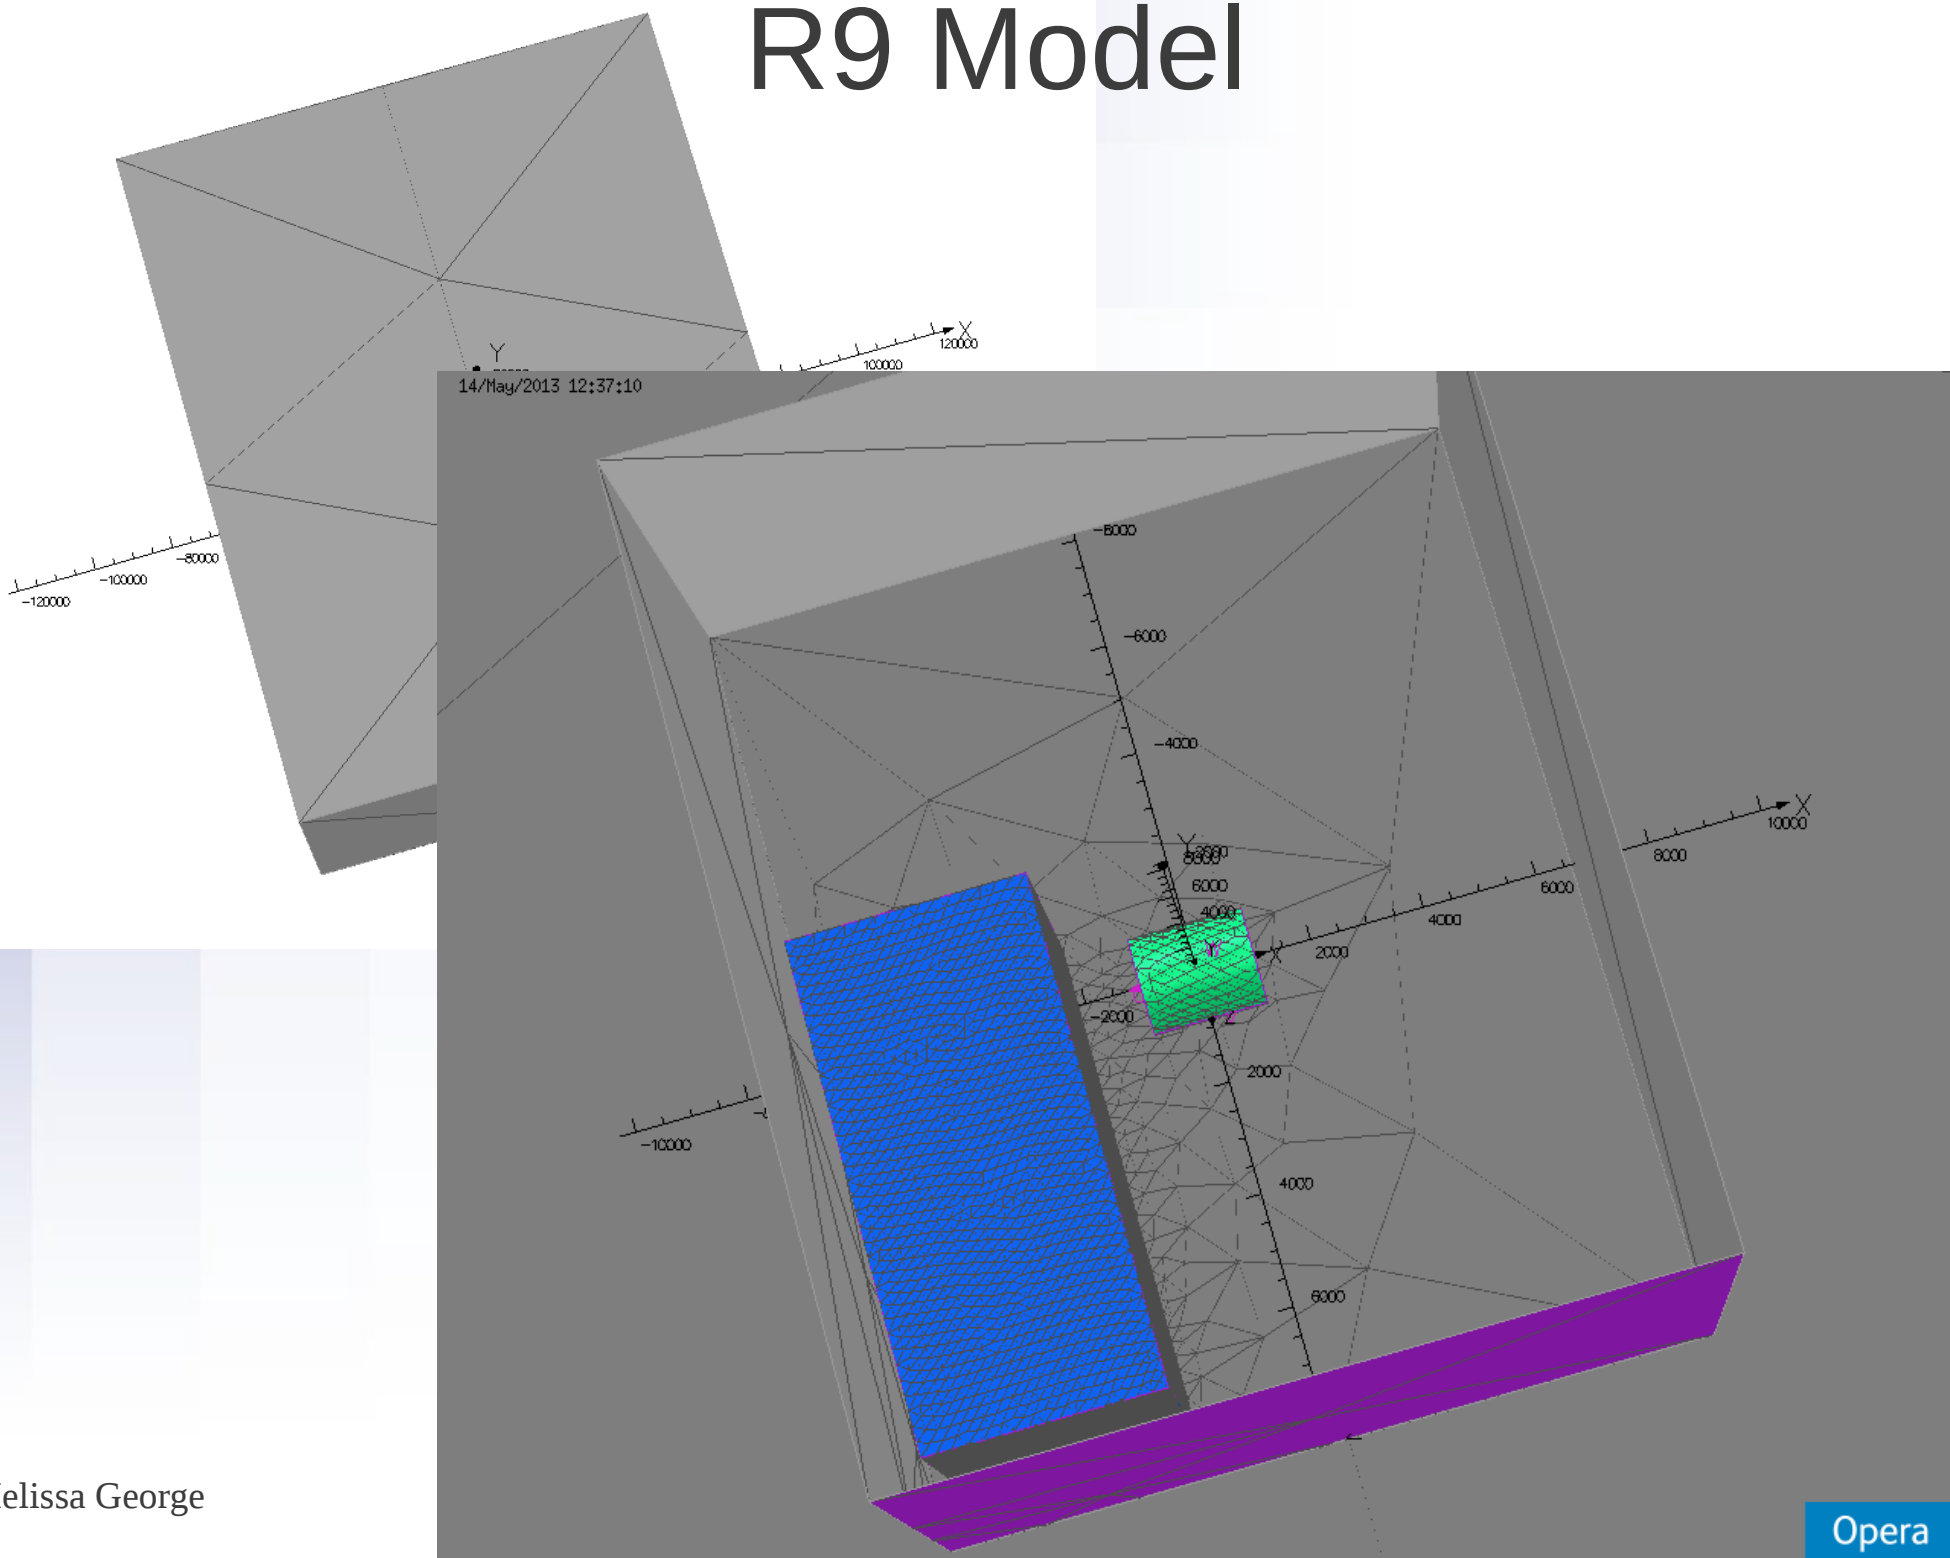

R9 Dimensions

~ +/- 5cm error

R9 Height = 9.000 m

R9 Model

14/May/2013 12:37:10

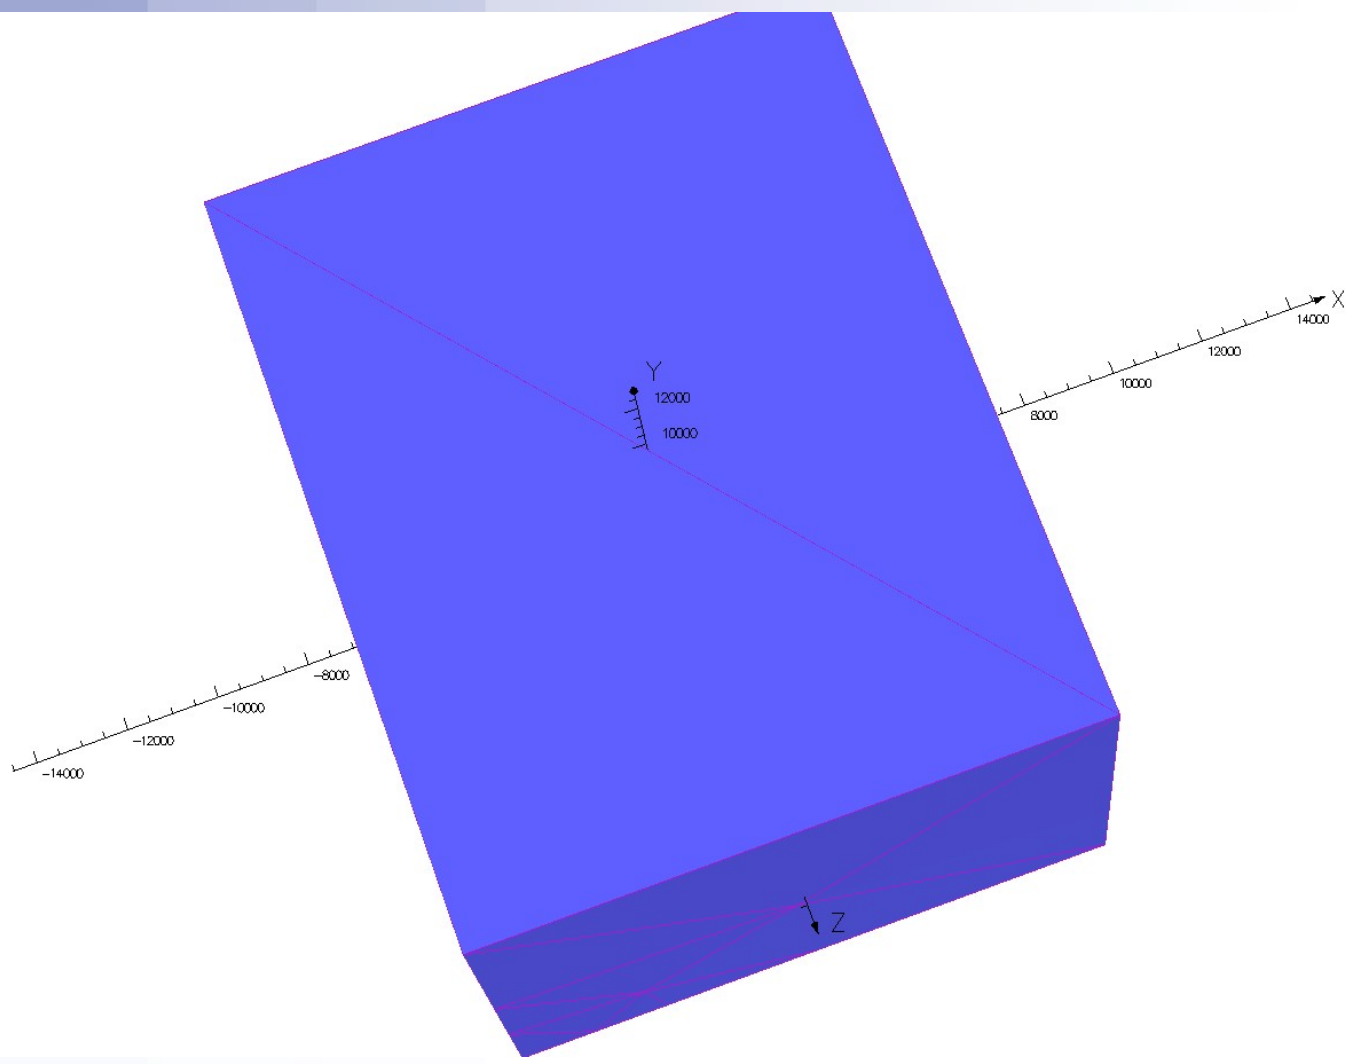

R9 Model

- V2 Model of room complete
 - No Walls
 - AFC is chosen by the user to be in flip or normal mode
 - Metal in floor and storeroom not included
- Meshing now works well and quickly.
- Solved using non-linear Newton-Raphson with adaptive conductor line integrals. **Not sure if this is necessary for a model that is really just air regions and a conductor?**
- When creating analysis database I got an error **Unable to load library icui18n "Cannot load library icui18n: (libcui18n.so.36: cannot open shared object file: No such file or directory)"** But the analysis still ran fine?!

Outer R9 Boundary = 67 μT

14/May/2013 12:50:47

Surface contours: BMOD

UNITS	
Length	mm
Magn Flux Density	T
Magnetic Field	A/m
Magn Scalar Pot	A
Current Density	A/mm ²
Power	W
Force	N

MODEL DATA
R9NoWallsV2.op3
TOSCA Magnetostatic
Nonlinear materials
Simulation No 1 of 1
563541 elements
124068 nodes
2 conductors
Nodally interpolated fields
Activated in global coordinates

Field Point Local Coordinates
Local = Global

Opera

Boundary conditions okay as BMOD at boundary is several orders of magnitude lower than centre

Inside R9

14/May/2013 12:59:54

Surface contours: BMOD

UNITS	
Length	mm
Magn Flux Density T	
Magnetic Field	A/m
Magn Scalar Pot	A
Current Density	A/mm ²
Power	W
Force	N

MODEL DATA
R9NoWallsV2.op3
TOSCA Magnetostatic
Nonlinear materials
Simulation No 1 of 1
563541 elements
124068 nodes
2 conductors
Nodally interpolated fields
Activated in global coordinates

Field Point Local Coordinates
Local = Global

Opera

Field is currently low as the region of the compressors and rack is just an air box.

R9 Model without walls ready for 'Alpha test' comparisons

R9 Model With Walls

- V3 of Model of room almost complete
 - Walls
 - AFC is chosen by the user to be in flip or normal mode
 - Metal in floor and storeroom not included
- Meshing now works and quickly, but has lots of warnings.
- Solved using non-linear Newton-Raphson with adaptive conductor line integrals.

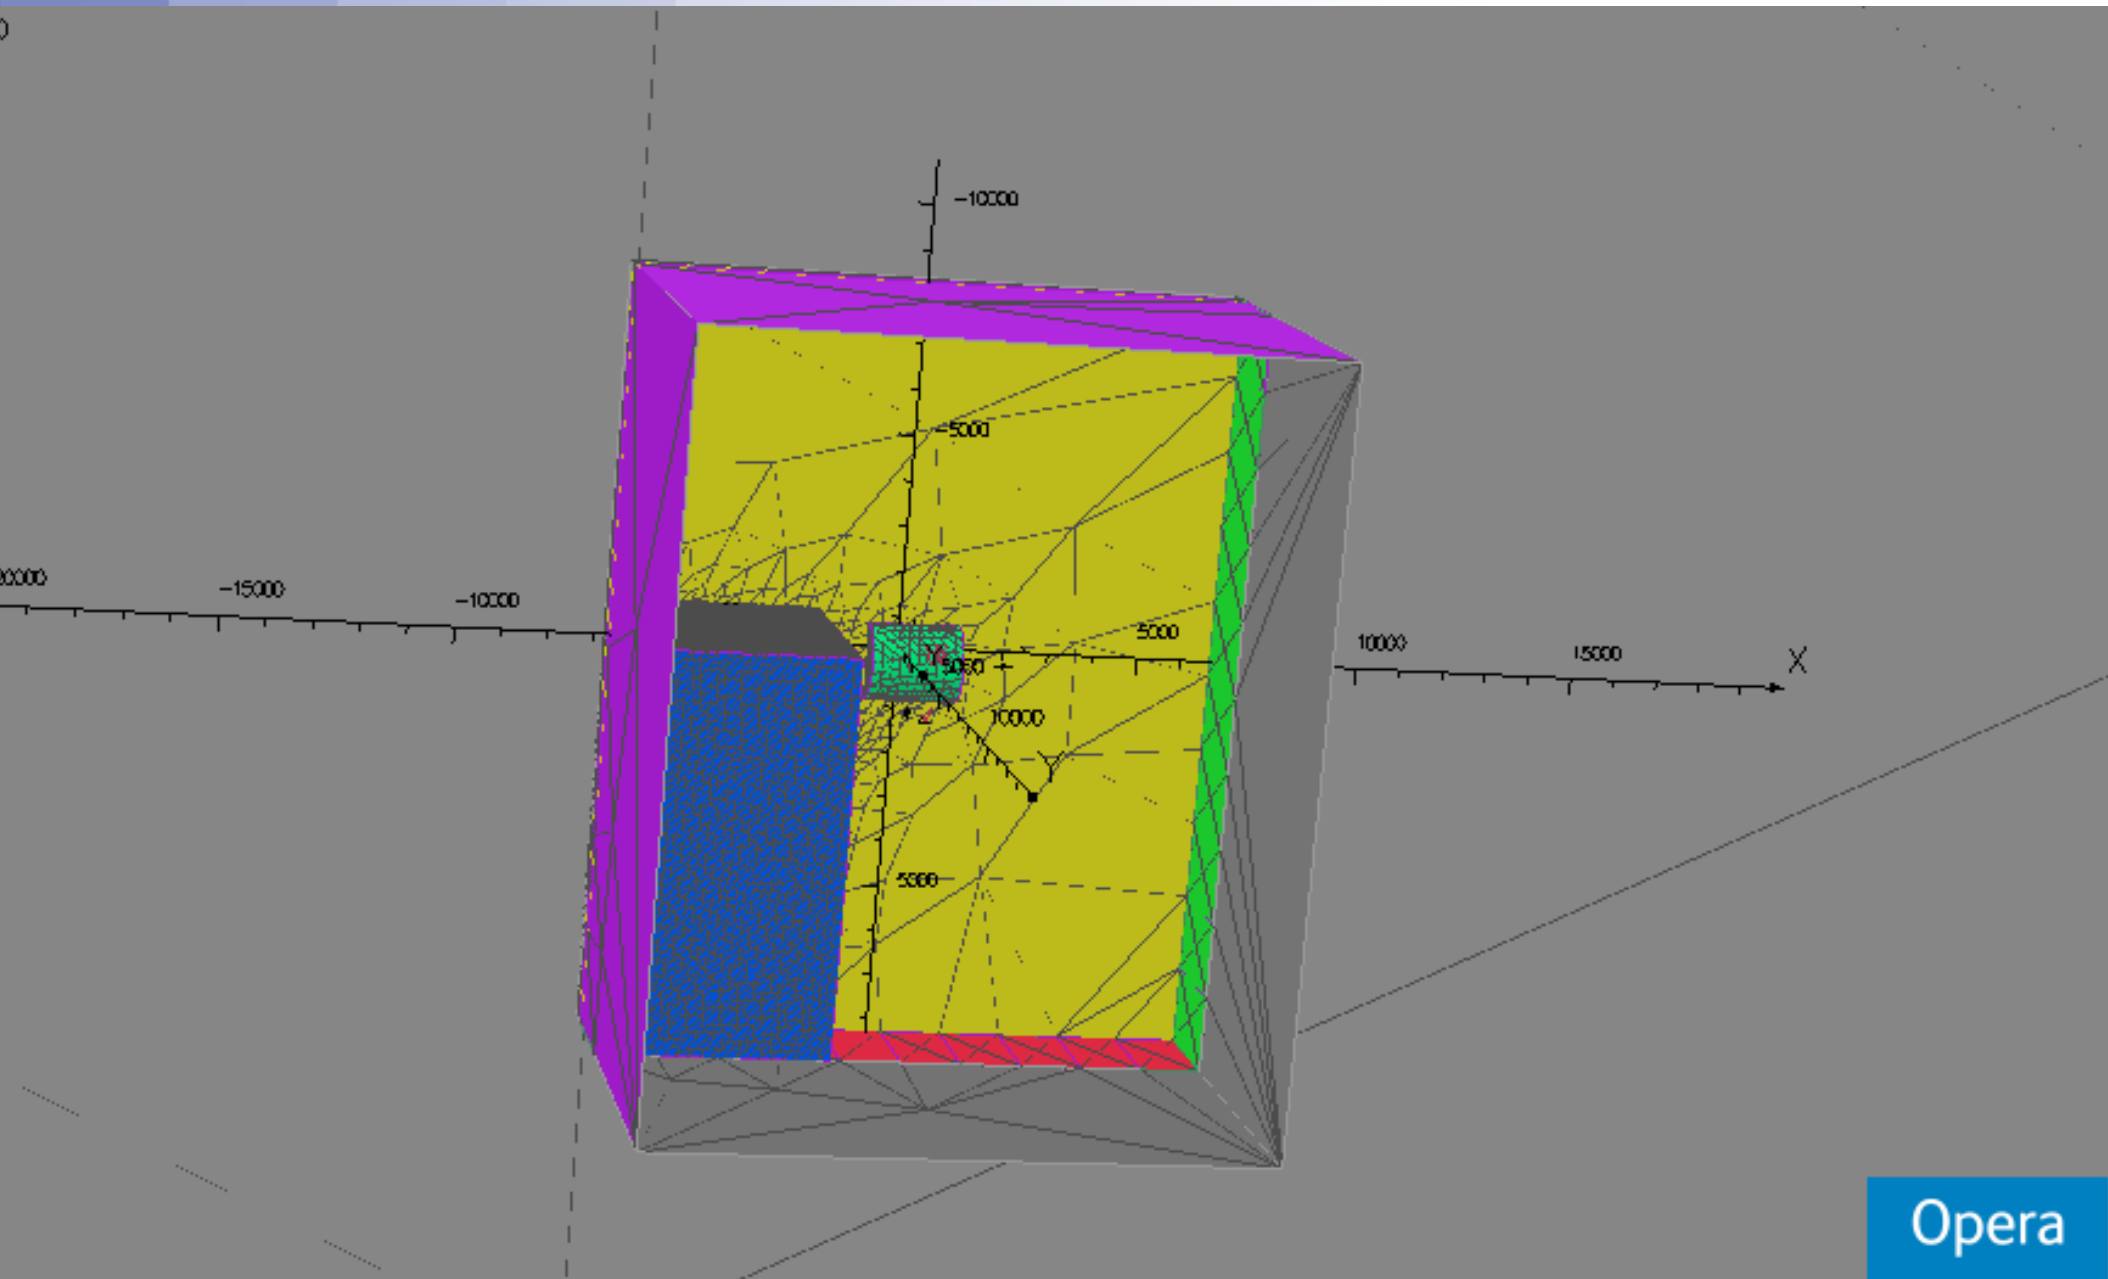

R9 Model With Walls

14/May/2013 14:23:50

R9 Model With Walls

Meshing Works but there are possible errors to fix

Rack Model – As Before

Compressor Model

30/Apr/2013 11:44:14

Compressor Model - Next

- There are some extra areas of mild steel that may or may not be modelled in a second round depending upon physics case. These areas are shown in red.
- Once meshing has been improved the model will be run with and without additional iron to judge the benefit of including it.

Next Steps

- ✓ Improve model meshing.
- ✓ Test model with analysis in OPERA.
- ✓ Include walls in R9 model.
- ✓ Cileste can begin comparisons with data.
- Improve R9 with wall model ready for data comparisons.
- Rack and Compressor model input.
- Further comparisons with data.
 - Inc Walls
 - Rack
 - Compressors
- Implement joists (and workshop) in model.
- More comparisons.
- Develop Rack and Compressor models as sub-models to hall model.
