# 240 MeV Solenoid (adj. J)

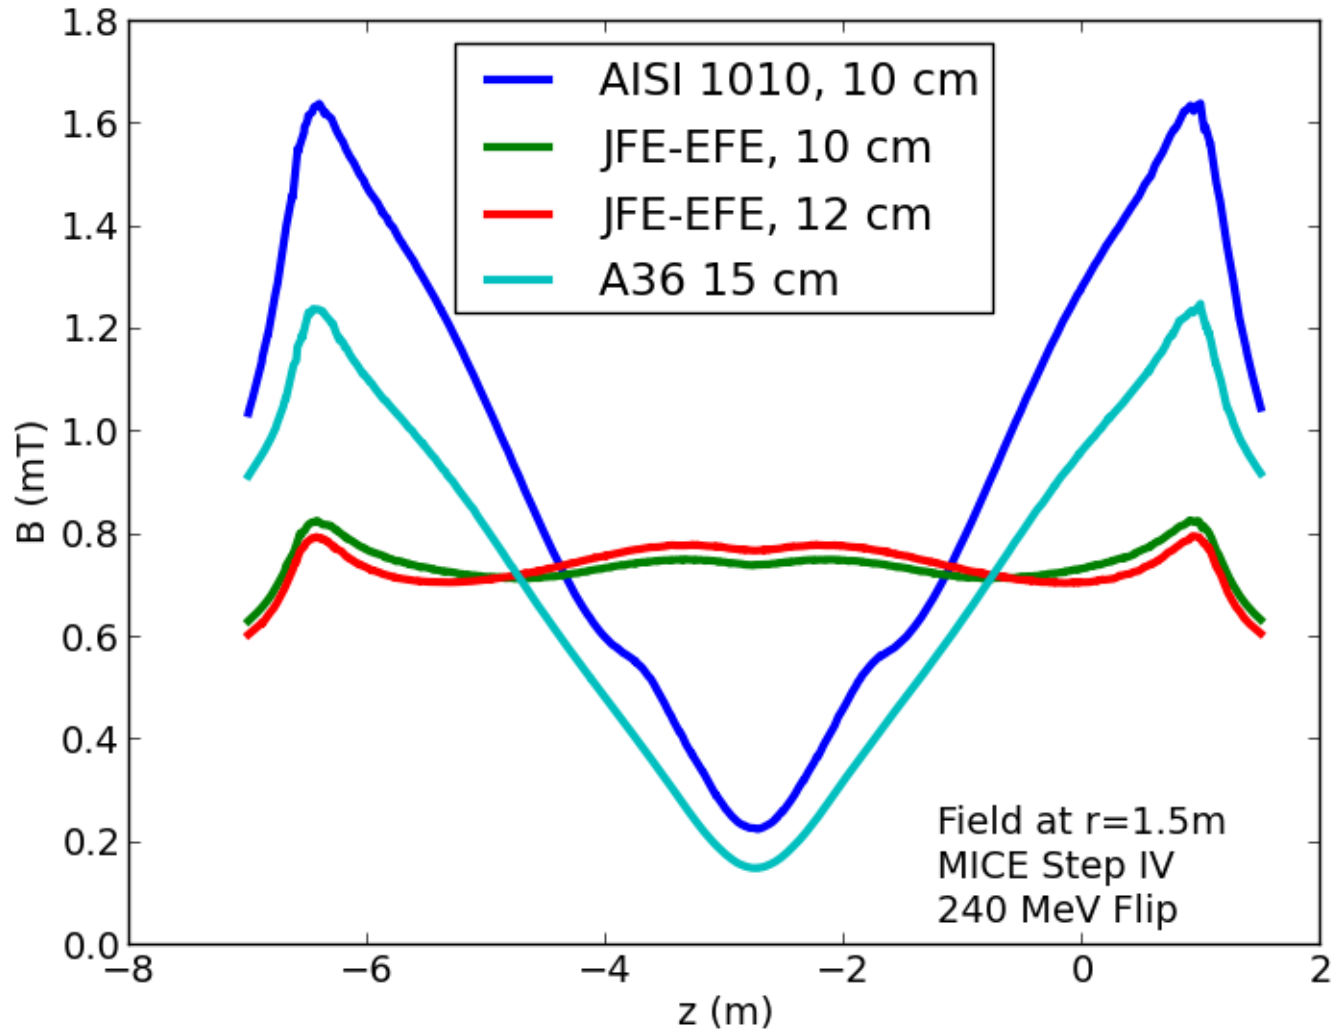

# New Solenoid Currents

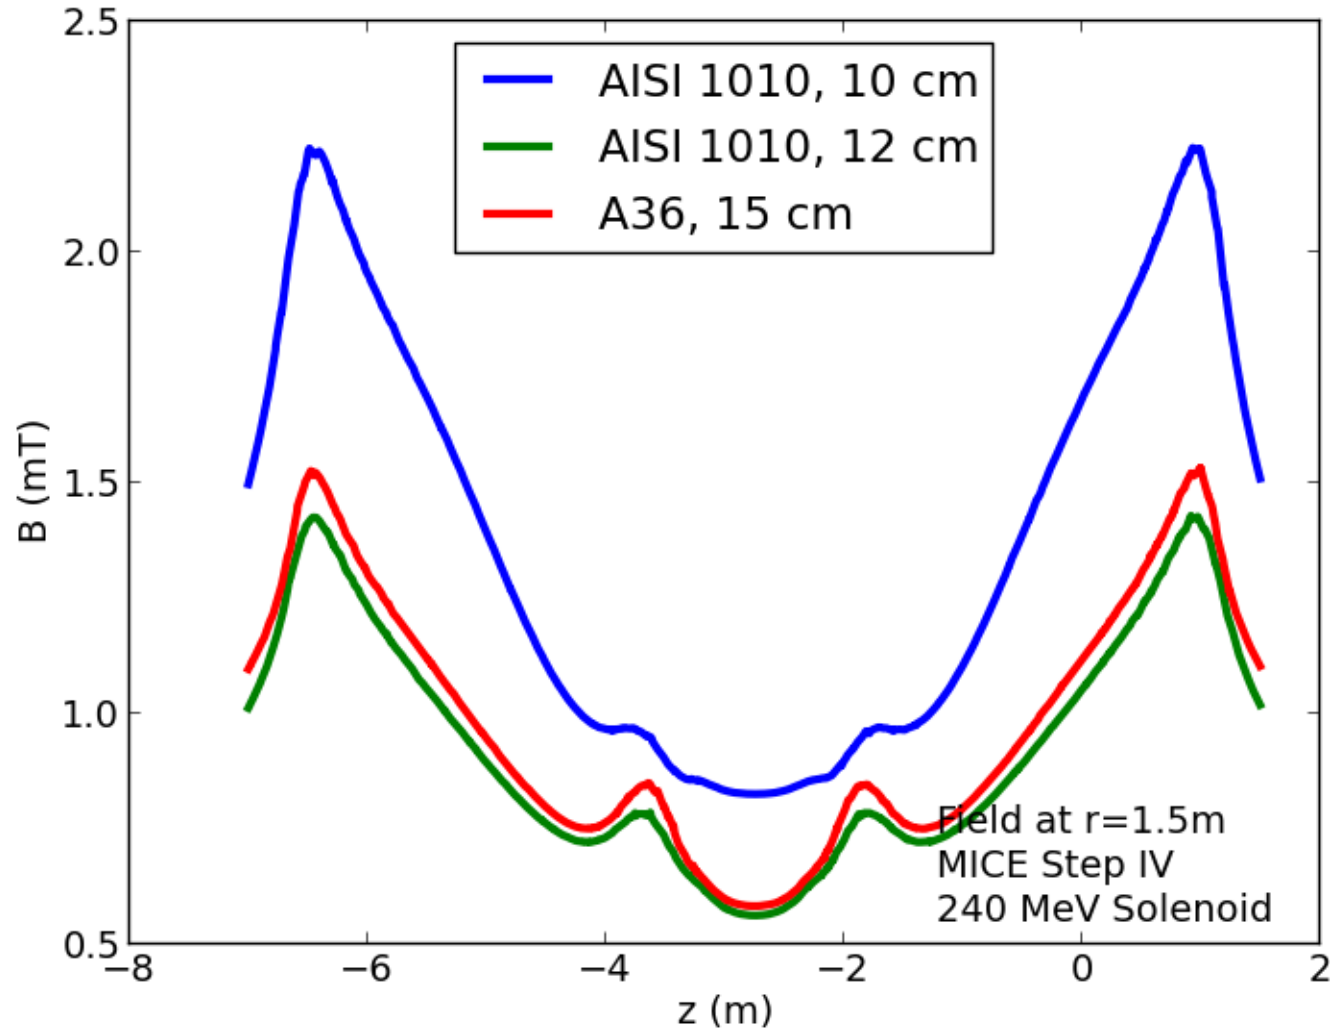

- Verification of PRY geometry
  - PRY in simulation 0.5 m too long
  - Shift of 0.25 m of Virostek disc causes increase in stray field
- Reason: ?
  - Theory: more flux coupled into PRY over smaller area
- Simulations
  - Forces
  - Gap study Virostek disc / extension

- Ample supplies
- Thickness: 15 cm
- Unknown pedigree
  - Good magnet steel?
  - C 0.3%?
  - samples
- Controlled area

- Preliminary survey in controlled area
  - No dose rate above background: move steel to low background area
- Survey on 8" grid pattern using hand held meter
- Examination with High Purity Germanium (HPGe) gamma spectroscopy unit
  - only Naturally Occurring Radioactivity Material: release for free use
